登录页整包上传帮助文档

为了方便项目对登录页进行全定制,V14新增了登录整包上传的功能。 本手册主要讲解登录页上传的一些注意事项 第一次进行定制建议下载模板,参考模板的格式规则去改 下载模板

制作登录包注意点

- 1. 打包方式和主题包的打包方式一致
- 2. 登录的文件名必须为login.jsp
- 3. 登录相关的配置文件必须为login_config.jsp
- 4. 必须包含配置文件【config.ini】

配置文件config.ini中的配置项:

```
name=登陆页上传测试模板
thumb=login_thumb.jpg
id=dragonBoat
```

字段分别为显示的名字(name)、缩略图(thumb)和id

路径注意事项

登录页模板页点击预览地址 resource/login/dragonBoat/login.jsp PS:dragonBoat 为位置文件的id名字 当选择当前登录页为默认后的地址为 /ekp/login.jsp 因为登录页选中后的路径都会变成/ekp/login.jsp,所以我们登录页中的路径都必须采用**绝对路径**

建议在jsp里定义一个变量

```
示例中的id为 dragonBoat <c:set var="templatePath" value="${LUI_ContextPath}/resource/login/dragonBoat/"/>
```

JSP中使用该路径变量,而不能写相对路径

```
<link type="text/css" rel="stylesheet" href="${templatePath}css/login.css?s_cache=${LUI_Cache}" />
<script src="${templatePath}/js/jquery.js"></script>
<script src="${templatePath}/js/jquery.fullscreenr.js"></script>
<script src="${templatePath}/js/custom.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script
```

logo图片(从配置项 config.jsp 中获取的变量)

```
<img src="${templatePath}${config.custom_logo}" /</pre>
```

JS中如何取绝对路径

定制功能介绍

上传的登录页目前是提供两块定制功能,logo和底部页脚通过读写login_config.jsp里的字段来进行定制

```
<%-- {"custom_logo":"images/logo.png","custom_footInfo_CN":"Copyright © 2001-2018 蓝凌软件 版权所有","custo
m_footInfo_HK":"Copyright © 2001-2018 藍凌軟件 版權所有","custom_footInfo_JP":"Copyright © 2001-2018 青ソフト
著作権所有","custom_footInfo_US":"Copyright © 2001-2018 Landray software"} --%>
<%@page import="java.util.Date"%>
<%@page import="com.landray.kmss.util.DateUtil"%>
<%@page import="net.sf.json.JSONObject"%>
<%@ page language="java" contentType="text/html; charset=UTF-8" pageEncoding="UTF-8"%>
   //版权信息的年份根据服务器时间自动获取
   String __year = DateUtil.convertDateToString(new Date(), "yyyy");
   JSONObject loginConfig = new JSONObject();
   loginConfig.put("custom_logo", "images/logo.png");
   loginConfig.put("custom_footInfo_CN", "Copyright © 2001-"+__year+" 蓝凌软件 版权所有");
   loginConfig.put("custom_footInfo_HK", "Copyright © 2001-"+__year+" 藍凌軟件 版權所有");
   loginConfig.put("custom_footInfo_JP", "Copyright © 2001-"+__year+" 青ソフト 著作権所有");
   loginConfig.put("custom_footInfo_US", "Copyright © 2001-"+__year+" Landray software");
   request.setAttribute("config", loginConfig);
```

1. logo上传功能 custom_logo

这个变量是用来获取logo的路径,上传后logo的路径在最外层。注意之前几个版本的登录页的logo是用背景图的方式来写的,在本次的制作中一定要用

```
<img src="${templatePath}${config.custom_logo}" />
/* ps:${templatePath}为前文提到的一个代表路径的变量 */
```

这种方式来制作logo, 否则上传无效

2.页脚定制功能

我们产品是支持多语言的,所以代表页脚的配置项变量名为custom_footInfo 代表语言的key值如 CN-中文 HK-繁体 JP-日文 US-英文 中间以"_"分隔,例如:"custom_footInfo_CN"

设计登录页容易遗漏的两个点

1. 第三方登录

V14版本登录页第三方登录,设计登录页和制作登录页主题包的时候需要考虑这方面

效果图:

登录页form.jsp 相应增加的代码为:

```
<div id="third_login_form" class="third_login_form">
                              <div class="third_login_header">
                                           <span><%=ResourceUtil.getString("login.title.scan")%></span>
                              </div>
                              <a href="https://oapi.dingtalk.com/connect/qrconnect?appid=&response_type=code&scope=snsa</pre>
pi_login&state=STATE&redirect_uri=http%3A%2F%2Fexp.landray.com.cn%3A8200%2Fekp%2Fthird%2Fding%2FpcScanLog
_item_icon" src="/ekp/third/ding/resource/images/scanCode-ding.png"></a>
                                            <a href="https://qy.weixin.qq.com/cgi-bin/loginpage?corp_id=wx7b6f5d246b88c3b6&redirect_u</pre>
=member" title="<%=ResourceUtil.getString("login.title.scan")%>"><img class="third_login_item_icon" src=
"/ekp/third/weixin/resource/images/scanCode-weixin.png"></a>
                                            <a href="https://open.work.weixin.qq.com/wwopen/sso/qrConnect?appid=ww4blbf0bff6eebd70&ag</pre>
entid=\&redirect\_uri=http\%3A\%2F\%2Fexp.landray.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fmetholder.com.cn\%3A8200\%2Fekp\%2Fthird\%2Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3Fwxwork\%2FpcScanLogin.do\%3FpcScanL
od \% 3D service \& state = state " title = "<\% = Resource Util.get String ("login.title.scan") \% ">< img class = "third_login.get String" ("login.title.scan") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login.get String" ("login.get String") % ">< img class = "third_login
_item_icon" src="/ekp/third/weixin/resource/images/scanCode-wxwork.png"></a>
                             </div>
```

第三方登录CSS样式参考:

```
/* 第三方登录 */
.third_login_form{padding:10px 25px;}
```

```
.third_login_header{margin-bottom: 20px;border-top: 1px solid #fff; text-align: center; position: relativ
e;}
.third_login_header span{font-size:12px;color:#333; padding: 0 5px;width: 94px;background-color: #fff;dis
play: inline-block; margin-top: -10px; margin-left: -47px;position: absolute;left: 50%;}
.third_login_header:after,
.third_login_list:after {content: '';display: table;visibility: hidden;clear: both;}
.third_login_list { margin: 0;padding: 0;list-style: none;text-align: center;}
.third_login_list > li { display: inline-block;}
.third_login_list > li > a {margin: 0 10px;width: 46px;height: 46px; display: block; border-radius: 50%;b
ackground-color: transparent;background-repeat: no-repeat;background-position: 50%;transition-duration: .
3s;}
.third_login_list > li > a img{ max-width: 100%; }
```

2.扫码登录

效果图:

登录框内头部代码新增:

/* 扫码登录相关 */

width: 50%;
float: left;

.login_iframe .header .header_tab{

```
font-size:16px;
 text-align:center;
 border-bottom: 2px solid transparent;
 color: #fff;
.login_iframe .header .header_tab:hover{
 color: ##38adff;
 cursor: pointer;
.login_iframe .header .header_tab.selected{
 color: #d0fdfa;
 border-color: #d0fdfa;
 height: 40px;
.login_iframe .header .header_tab:first-child{
 border-top-left-radius: 8px;
.login_iframe .header .header_tab:nth-child(2){
 border-top-right-radius: 8px;
/* 二维码相关样式 */
.form_pcscan{
 display:none;
 padding: 15px 35px;
.form_pcscan_iframe{
 border: 0;
 width: 100%;
 height: 170px;
.form_pcscan_tip{
 color: #999;
 text-align: center;
```

登录框的头部header里的内容不要轻易改动,因为这里是可以配置成选项卡的样式,这里的样式需要做两种。一种纯文字的,一种选项卡
